TODAY Agenda

- 1. The problem and why it matters
- 2. Proposed solution
- 3. Live walkthrough of the site
- 4. Technology stack
- 5. Database schema
- 6. Feature checklist vs. brief
- 7. Security and UX decisions
- 8. Team contribution
- 9. Challenges and what we learned
- 10. Next steps

The problem

Quality content is everywhere - trust is not.

- People spend money on books before knowing if the content matches what they need.

Amazon reviews are mixed with ads and bought ratings, which hurts trust.

- Readers interested in finance, investing and personal growth want an opinionated, focused space.

A niche review site is more useful than a generic marketplace.

- Existing university prototypes rarely connect reviews, ratings and favourites into a real flow.

Our goal was to build one that does - end-to-end.

Our solution

A focused review platform, open to everyone.

Curated catalog

Eight bestsellers in Finance, Investing, Business, Mindset, Lifestyle and Habits - hand-picked.

Trusted reviews

1-5 star ratings + written comments from authenticated readers, no anonymous spam.

Personal library

Favourite books you want to read, manage your own reviews, update your account at any time.

Walkthrough

What happens when a reader visits bookstore/

- | | |
|-----------------------------|---|
| 1. Home | Hero banner + 8 random bestsellers with stars, cover and View details. |
| 2. Search / genre | Navbar search (LIKE across title, author, description) + genre subnav tabs. |
| 3. Book page | Cover, metadata, full description, average star rating, list of reviews. |
| 4. Sign up / sign in | Password hashed with password_hash(); login sets \$_SESSION['user_id']. |
| 5. Submit review | Logged-in users pick 1-5 stars + comment; prepared insert into reviews. |
| 6. Favourites | Add/remove from any card; dedicated Favourites page lists them. |
| 7. My Account | Update name/email/password; see and delete your own reviews. |

Technology stack

Small, boring, reproducible.

Layer	Technology	Why
Server	Apache 2.4 (XAMPP)	Local dev standard; same as PHP classroom.
Language	PHP 8.2	Sessions, password_hash, mysqli built-in.
Database	MariaDB 10 / phpMyAdmin	4 tables, foreign keys, unique constraints.
Frontend	HTML5 + CSS3 (custom, no framework)	Forest-green + antique-gold palette.
Security	Prepared statements + htmlspecialchars	Prevents SQL injection and XSS.
Version ctrl	Git + GitHub	Pair collaboration and submission.

Database schema

Four tables, two foreign keys, one unique constraint.

users

- id (PK)
- name
- email (unique)
- password (hash)
- created_at

books

- id (PK)
- title
- author
- description
- image
- genre
- created_at

*reviews and favorites reference both users and books.
UNIQUE(user_id, book_id) in favorites prevents duplicates.
Passwords stored as Bcrypt/Argon hashes - never plain text.*

reviews

- id (PK)
- book_id FK -> books
- user_id FK -> users
- rating 1..5
- comment
- created_at

favorites

- id (PK)
- user_id FK -> users
- book_id FK -> books
- UNIQUE(user_id,book_id)
- created_at

Brief checklist

Every functional element requested by the brief is implemented.

✓ Home page with random products	<i>index.php</i>
✓ Navigation menu with dropdowns	<i>navbar.php</i>
✓ Category filtering by genre	<i>index.php ?genre=...</i>
✓ Detailed view + review form	<i>book.php</i>
✓ User registration and sign-in	<i>register.php, login.php</i>
✓ Product rating system (stars)	<i>book.php, index.php</i>
✓ Search functionality	<i>search.php</i>
✓ User favourites list	<i>favorites.php, toggle_favorite.php</i>
✓ User account page (manage reviews + update email/password/username)	<i>account.php</i>

Who did what

Pair project - equal contribution, different focus areas.

Luiza Miranda Gomes

Student ID 15186

- CSS theme (green + gold, cards, hero)
- Auth flows and review submission
- Favourites feature
- README, guide and this report

Willian Yudy Futema

Student ID 15160

- Database schema and SQL seed data
- Book detail page and search
- Account management page
- Testing and browser QA

10 / 10 - THANK YOU

Thank you.

Questions, comments, code review: we are happy to walk through any file.
